

# *Tilapia brevimanus*

## Ecological Risk Screening Summary

U.S. Fish and Wildlife Service, June 2015

Photo not available.

### 1 Native Range, and Status in the United States

---

#### Native Range

From Froese and Pauly (2015):

“Africa: Middle and lower courses of coastal rivers from Guinea-Bissau (Geba and Corubal Rivers) to Liberia (Cess River) [Teugels and Thys van den Audenaerde 2003]. Possibly also present in Côte d'Ivoire [Teugels et al. 1988].”

#### Status in the United States

This species has not been reported in the U.S.

#### Means of Introductions in the United States

This species has not been reported in the U.S.

### 2 Biology and Ecology

---

#### Taxonomic Hierarchy and Taxonomic Standing

From ITIS (2015):

“Kingdom Animalia  
Subkingdom Bilateria  
Infrakingdom Deuterostomia  
Phylum Chordata  
Subphylum Vertebrata  
Infraphylum Gnathostomata  
Superclass Osteichthyes  
Class Actinopterygii  
Subclass Neopterygii  
Infraclass Teleostei  
Superorder Acanthopterygii  
Order Perciformes  
Suborder Labroidei  
Family Cichlidae  
Genus Tilapia

Species *Tilapia brevimanus* Boulenger, 1911”

“Taxonomic Status: valid”

## **Size, Weight, and Age Range**

From Froese and Pauly (2015):

“Max length : 24.8 cm SL male/unsexed; [Teugels and Thys van den Audenaerde 1992]”

## **Environment**

From Froese and Pauly (2015):

“Freshwater; demersal.”

## **Climate/Range**

From Froese and Pauly (2015):

“Tropical; 24°C - 26°C [Baensch and Riehl 1995]; 14°N - 8°N”

## **Distribution Outside the United States**

Native

From Lalèyè (2010):

“Côte d'Ivoire; Guinea; Guinea-Bissau; Liberia; Sierra Leone”

Introduced

No introductions of this species have been reported.

## **Means of Introduction Outside the United States**

No introductions of this species have been reported.

## **Short description**

From Froese and Pauly (2015):

“Dorsal spines (total): 15 - 17; Dorsal soft rays (total): 11-14; Anal spines: 3; Anal soft rays: 8 - 10. Diagnosis: body oblong (body depth 32.0-46.1% SL); outer teeth on jaws bicuspid and spatulated; micro-gillrakers present; transversal bands on the flanks [Teugels and Thys van den Audenaerde 2003].”

## **Biology**

From Lalèyè (2010):

“This species is known from the middle and lower courses of coastal rivers”

## Human uses

From Lalèyè (2010):

“This species is harvested for human consumption.”

## Diseases

No OIE-notifiable diseases have been reported for this species.

## Threat to humans

From Froese and Pauly (2015):

“Harmless”

## 3 Impacts of Introductions

---

No introductions of this species have been reported.

## 4 Global Distribution

---

**Figure 1.** Distribution of *T. brevimanus*. Map from GBIF (2015).

## 5 Distribution within the United States

---

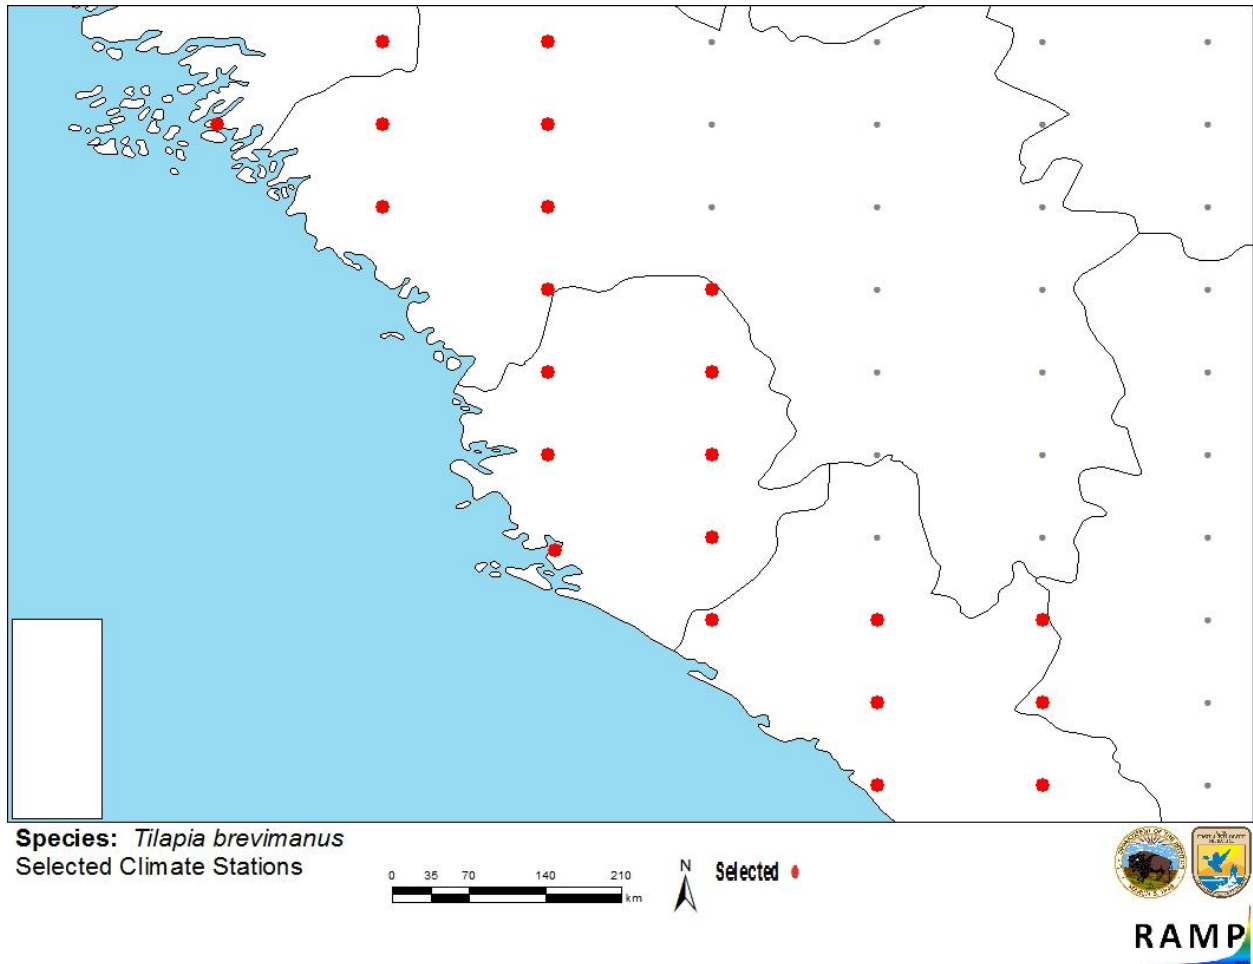

This species has not been reported in the U.S.

## 6 Climate Matching

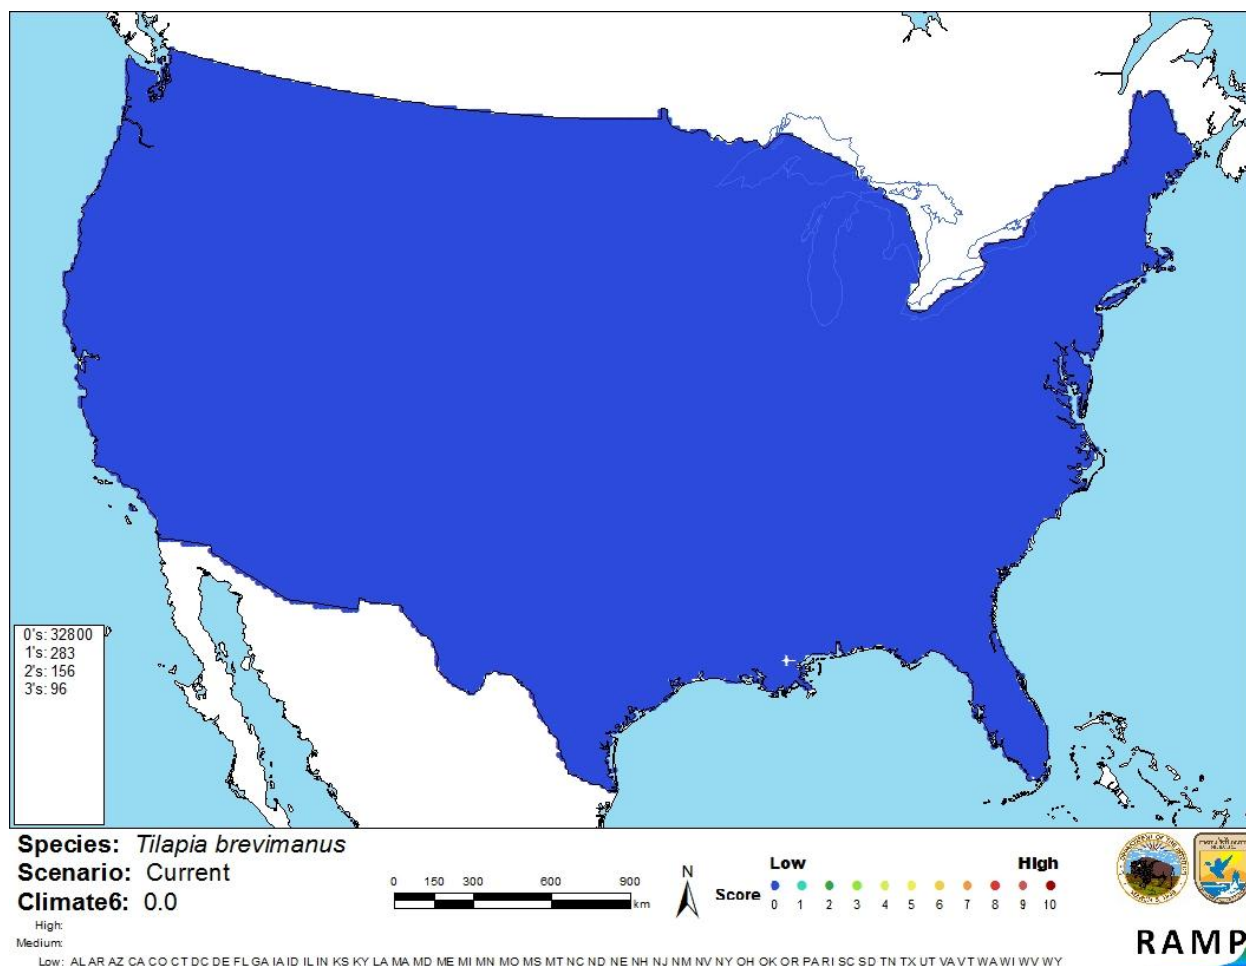

---

### Summary of Climate Matching Analysis

The climate match (Sanders et al. 2014; 16 climate variables; Euclidean Distance) was low throughout the contiguous U.S., reflected in a Climate 6 proportion of 0.0. The range for a low climate match is 0.000 to 0.005.

**Figure 2.** RAMP (Sanders et al. 2014) source map showing weather stations selected as source locations (red) and non-source locations (gray) for *T. brevimanus* climate matching. Source locations from GBIF (2015).

**Figure 3.** Map of RAMP (Sanders et al. 2014) climate matches for *T. brevimanus* in the continental United States based on source locations reported by GBIF (2015). 0= Lowest match, 10=Highest match. Counts of climate match scores are tabulated on the left.

## 7 Certainty of Assessment

Little information is available on the biology of *T. brevimanus* and it has not become established outside its native range. The certainty of this assessment is high because the lack of information about this species precludes any assessment other than “uncertain” risk.

## 8 Risk Assessment

### Summary of Risk to the Continental United States

*Tilapia brevimanus* is a demersal cichlid native to coastal rivers in West Africa. It has not been reported outside its native range. Because *T. brevimanus* has no history of invasiveness, it is currently impossible to know what impacts *T. brevimanus* might have if introduced to the U.S. Climate match to the contiguous U.S. is low. Overall risk is uncertain.

## **Assessment Elements**

- **History of Invasiveness (Sec. 3):** Uncertain
- **Climate Match (Sec.6):** Low
- **Certainty of Assessment (Sec. 7):** High
- **Overall Risk Assessment Category: Uncertain**
